

Riverside Risk Advisors Case Study

Seamless Data Migration, Improved Performance, Enhanced Security, and Cost Savings.

[🔗 Read the Full Case Study](#)

Project Overview

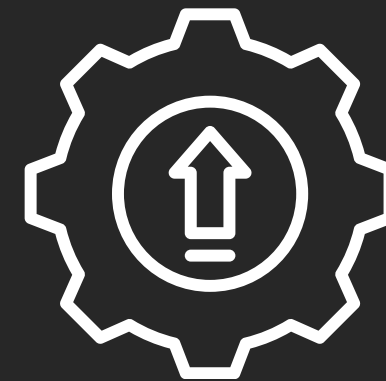

“

We followed Edge's lead – they were terrific, and our people are happy. They know our firm and systems well and response times are very fast, which is critical for us in the financial industry.”

SEAMLESS

Successful Data Migration Without Loss, Disruptions, or Data Integrity Concerns

ENHANCED

New Network Equipment with Improved Performance and Enhanced Security

SIMPLIFIED

Simplified Network Infrastructure Leading to Peace of Mind & Cost Savings

The Challenge

The Company

Riverside Risk Advisors is a financial risk advisory firm specializing in hedging interest rate, currency, equity, and commodity risk. Our initial encounter with Riverside occurred when challenges arose during a cloud storage migration process, and Riverside required our help to seamlessly transfer these critical documents and files to a single location without compromising data integrity or causing any loss.

Goals

SIMPLIFY

Establish a simplified, more stable, and reliable network environment

UPDATE

Reconfigure and replace network equipment for improved performance and enhanced security

MIGRATE

Safely and seamlessly transfer critical documents and files to a new cloud storage provider

The Results

Our team executed a seamless data migration process to the preferred cloud storage provider, ensuring that all valuable data was safely transferred without any loss or compromise. This instilled peace of mind within Riverside and enabled the team to work seamlessly on the new platform without any disruption or data integrity concerns.

We also identified a critical area for improvement within the infrastructure by reconfiguring and upgrading the network equipment at the office. This decision led to immediate benefits of improved performance and enhanced security, as well as cost savings, simplifying network infrastructure, and establishing a more stable and reliable network environment.
